Introduction

US healthcare providers are poised to spend billions in 2015 on information technology. The jobs, promotions, and bonuses of many healthcare professionals depend upon a few key questions.

- Where will this money be spent?
- Which vendors are poised to gain market share?
- Who is poised to miss out?

Over a recent three week period, we used our enterprise data platform (Reaction) to find out. We reached out to healthcare leaders and asked about their purchase intentions in 2015. We received feedback from over 950 decision-makers representing over a quarter of all hospitals in the United States. Over 80% of these hospital leaders were C-level executives with the remainder still having titles like Vice President, Department Head or Director.

The result is a sample that represents approximately 25% of the US Healthcare system - easily large enough to project where the market is going.

You can see the titles of hospital leaders and the facilities represented in appendixes A & B respectively.
About Industry Insights

You will notice that this report is very different from one you would purchase (for significant money) from a market research firm. Those reports use a small amount of data to generate a lot of analysis.

In contrast, we believe that large amounts of data will make the analysis easy. Our team will provide some limited insights within this report, but there will be many conclusions the data points to that we won’t mention. We strongly recommend reviewing the data specific to your space and analyzing it closely to draw your own conclusions.

If there is a chart, cross tab, or pivot table that you want to see but isn’t in this report, feel free to reach out to Jeremy Bikman (jeremy.bikman@reactiondata.com). Our team can pull additional data for you.

Jeremy Bikman
Email: jeremy.bikman@reactiondata.com
2015 Purchases

2015 is poised to be the year of ICD-10 Migration. Nearly 60% of all hospital leaders said their facility will address ICD-10 in the coming year. This number jumps up over 70% among many groups who will work with it specifically (more than 70% of CFOs, CIOs, CMIOs and CMOs each indicated ICD-10 is on the radar for 2015).

This chart gives the percentage of hospital leaders who indicated their facilities will purchase the indicated products in the coming year.

**Figure 1: 2015 Purchase Intentions**
Purchase Intention By Hospital Size

What hospitals intend to purchase varies depending upon their size. We broke hospitals into 5 groups based upon their size.

- <100 Beds
- 100-250 Beds
- 251-500 Beds
- 501-1000 Beds
- >1000 Beds

Figure 2: Participating Hospitals by Facility Size
Figure 3: 2015 Purchase Intention < 100 Beds
In reviewing this data, it’s very apparent that the bigger the organization the more money and resources it has to spend. In general, the likelihood of making a purchase in 2015 goes up with the bed count. This is true for virtually every product. These findings are inherently intuitive.

Very small hospitals with less than 100 beds are going to be very judicious in their respective spending this year. This was particularly true of Data Analytics, which typically requires a level of in-house savvy and resources that most small organizations simply don’t have.

However, very small hospitals were more likely to make an EHR purchase than other any other hospital segment under the 500 bed range.

Slightly larger hospitals (100-250 beds) reflect many of the current trends in the industry. The vast majority of them already have their go-forward EHR and core financial systems in place and as such are focusing on solutions that can move them towards more cost-effective and responsive patient care (analytics, engaging patients, coordinating care, etc).

Mid-sized community hospitals were the least likely of any group to be purchasing an EHR this year. There is also going to be a flurry of buying activity surrounding managing, coordinating, and engaging patient populations.

Large stand-alone community hospitals and small IDNs will be buying a lot of products this year. The relatively high rate of EHR-focused purchasing activity may explain the lower-than-expected rate of patient engagement. Perhaps it’s simply a case of walking before running.
Figure 5: 2015 Purchase Intention 251-500 Beds

Figure 6: 2015 Purchase Intention 501-1000 Beds
The high-end of the market is also the one with the largest needs, and appetites, for next generation healthcare solutions. The largest facilities were more likely to make purchases than any other hospital segment of the market. Every single facility over 1000 beds said it would purchase at least one major enterprise solution in 2015.

Figure 7: 2015 Purchase Intention > 1000 Beds
Electronic Health Record systems are pretty ubiquitous throughout the market, but that doesn’t mean sales aren’t possible. In fact, over 26% of US hospitals are replacing existing solutions or are adding an additional one in ambulatory settings.

With more than 50% of CMIOs talking about purchasing a new EHR in 2015, there will be plenty of sales opportunities for EHR vendors.

Here are the purchase intentions by title:

Figure 8: EHR Purchase Intention by Role
EHR Market Share

The EHR market includes some very powerful members but there isn’t a dominant force that controls all aspects of the hospital market. That is mostly because different vendors appeal to different sizes of facilities.

There are very strong themes among specific hospital sizes, though:

- Among the smallest facilities, CPSI and eClinicalWorks are the market leaders
- MEDITECH, McKesson and Siemens each lead in mid-range hospital categories
- Epic and Cerner dominate among the largest facilities

*Figure 9: EHR Market Share*

*Primarily Ambulatory/Outpatient*
Figure 12: EHR Market Share 251-500 Beds

GE Healthcare

GE Healthcare is known primarily for its substantial presence in all things related to medical imaging, but its outpatient EHR solution has substantial market share in large healthcare systems with more than 1000 beds. GE’s other healthcare IT solutions also show up throughout this report in various places.

GE’s Take

*Transforming information into actionable insights to help drive better outcomes*

GE Healthcare Integrated Care Solutions help drive better outcomes by accelerating workflows, streamlining processes, and improving analytics capabilities. Centricity™ Solutions can help simplify decision-making across the enterprise by delivering actionable information from population health, care delivery, enterprise imaging, and financial management platforms. All are designed to unlock the predictive value embedded in large data sets and apply it to make more informed decisions where it matters most – by the physician and support organizations at the point of care.

From EMR for ambulatory care to advanced workflow solutions for specialty care areas, GE Healthcare offers solutions tailored for healthcare provider’s unique needs—and that help deliver quality outcomes and enhance productivity by streamlining primary and specialty care workflows, including clinical documentation, quality reporting, analytics and surveillance.

Population Health Management solutions include data control, healthcare analytics, care coordination and management, and wellness and patient management. And through GE Healthcare’s new partnership with Caradigm™, they are helping to drive successful outcomes for customers, in particular through Caradigm’s partnership with a major health plan. These solutions are addressing the customer’s needs by enabling transparency through
'one patient, one record' – providing access to patient information across 19 different applications and databases to providers. Because a patient’s condition can evolve rapidly, built-in analytics were needed to provide updates in near-real time.

Health system operating margins are under significant pressure. Revenues are flat. Medicare reimbursement is declining. Expenses and waste continue to rise. As the risk of financial viability pushes the business of healthcare to its limits; pressure is increasing to provide patients with greater transparency and a more personalized experience. Centricity Solutions for Financial Management are reform ready, right now. Whether in the hospital setting, the ambulatory setting, or both, GE Healthcare can help your organization deliver solid patient outcomes in the face of change, access relevant data to manage margins and drive profitability, connect data across the enterprise for greater insights into patient populations, and take on more risk without compromise.

Look to GE Healthcare for innovative ways of thinking that blend clinical workflow and domain expertise, software and analytics, a strong partner ecosystem – and most importantly, knowledgeable people – to help move more strategically along the path from treating illness to managing health.

**Robust solutions supported by enterprise-class professional services**

GE Healthcare Integrated Care Solutions include access to a team of consultants and a portfolio of services that help achieve optimum system performance and staff productivity.

At the start of customer engagements, the GE Healthcare team of consultants can help assess imaging needs and review current state workflows. Consultants will help design an optimal workflow to meet unique organizational requirements. Education consultants then help drive change across the enterprise and enhance utilization. GE Healthcare support services help maintain system performance through ongoing assessments, 24/7 technical support, and remote monitoring – which has helped some customers reduce the cost of outages by an average of ~$250K per year.
EHR Mindshare

Future sales of EHRs seem to be congregating around three companies: Cerner, Epic and MEDITECH. However, the opportunity for other competitors is better than the aggregate mindshare graph suggests because different vendors compete for very different hospital segments of the market.

- MEDITECH leads mindshare among hospitals with up to 250 beds
- Epic is expanding its influence downstream in the market and leads mindshare from 250-1000 beds
- Cerner leads in mindshare for hospitals with more than 1000 beds
- McKesson is being considered by hospitals in every single market, as is Allscripts (except for exceptionally large health systems)
Figure 16: EHR Mindshare < 100 Beds

*Primarily Ambulatory/Outpatient

Figure 17: EHR Mindshare 100-250 Beds

*Primarily Ambulatory/Outpatient
Figure 18: EHR Mindshare 251-500 Beds

Figure 19: EHR Mindshare 501-1000 Beds
Figure 20: EHR Mindshare > 1000 Beds

*Primarily Ambulatory/Outpatient
It’s no secret that Epic has grown its market share massively over the past decade. It is poised to do so again, obtaining substantial mindshare for its solution throughout this report. Typically, Epic starts to dominate among hospitals that have at least 250 beds. While a few facilities smaller than that will consider Epic, the sweet spot for them certainly seems to be in the 250-1000 bed range.
Epic’s Take

Epic makes software for mid-size and large medical groups, hospitals and integrated healthcare organizations – working with customers that include community hospitals, academic facilities, children’s organizations, safety net providers and multi-hospital systems. Our integrated software spans clinical, access, and revenue functions and extends into the home.

Epic’s on-time, on-budget track record is one of the best in healthcare, as rated by independent reviewers. Epic software is quick to implement, easy to use and highly interoperable through industry standards.

Founded in 1979, Epic is private and employee-owned. We develop, install, and support all our applications in-house. Epic’s leadership team includes clinicians, developers, and process experts – people deeply experienced in patient care and healthcare technology.

(Infographic — Epics Stats)
MEDHOST

MEDHOST’s appeal is centered among smaller facilities, particularly those under 100 beds.

**MEDHOST**'s Take

MEDHOST is a provider of market-leading enterprise, departmental and healthcare engagement solutions. Our healthcare management system includes intuitive, easy-to-use and SaaS-enabled solutions complemented by a robust suite of managed hosting, outsourcing and consulting services that are changing how clinicians and hospital leaders work and communicate, while generating notable operational, patient flow, care and revenue improvements.

MEDHOST is committed to delivering healthcare technology services that enable our Customers to maximize revenue capture, optimize administrative efficiencies and better manage enterprise clinical capabilities.

By working with and gaining insight from our Customers, MEDHOST invests in software development that both reflects current requirements and anticipates needs often times in advance of marketplace demand. Through this visionary approach, we are able to successfully serve and meet the diverse needs of a dynamic provider marketplace, including general acute care critical access and community hospitals, multi-facility health systems, behavioral health providers, post-acute care facilities and specialty surgical centers.

We are singularly focused on listening to our Customers in order to ensure we are developing the right solutions to meet their needs. In fact, our principle goals are centered around developing Customer-focused solutions and delivering Customer satisfaction. The art of listening to understand is a core value that has enabled MEDHOST to become one of the largest health solutions companies in the U.S., serving more than 1,000 hospitals nationwide.

This has led to innovative healthcare solutions like YourCareUniverse, an engagement platform connects all stakeholders in a care community, with an emphasis on keeping the patient centered in all healthcare interactions. Through the YourCareUniverse suite of solutions and focused consulting services, MEDHOST has developed tools to allow the patient and provider to more effectively collaborate on achieving optimal levels of health and wellness.

Since simply having an EHR is not enough to succeed in healthcare, MEDHOST created a Physician Advisory Board to drive the development of an intuitive and innovative EHR. With a laser-focus on creating a next-generation solution that improves efficiency and fits seamlessly within the existing clinician workflow, the MEDHOST Physician Experience was born. Again, by listening to physicians, the chart, note and order functions of the Physician Experience deliver workflow optimization based on the natural way physicians work, with a clean, uncluttered interface and a brilliant design. The benefits are many for hospitals and physicians, from accurate documentation,
enhanced patient care and precise reimbursement.

The mission of MEDHOST is to be a leading provider of software solutions and services designed to improve the clinical, financial and operational performance of healthcare providers worldwide. Every day, we take steps toward fulfilling that mission by empowering hospitals of all types and all sizes to better manage care and the business of healthcare.
EHR Renewal

Our research indicates that a strong replacement market is developing for EHR products. 27% of hospitals indicated they are looking to replace their current EHR, and, of those, 31% are sure they aren’t going back to their current vendor.

That means at least 8% of US Hospitals will replace their current EHR vendor in 2015. In addition, another 1-2% may leave. All told, nearly 10% of the US Hospital market is up for grabs this year.

Note: We do have specific renewal rates for each unique vendor, but they won’t be provided in this report. ReactionData would be happy to provide each vendor’s renewal rate. Please contact Jeremy Bikman, jeremy.bikman@reactiondata.com, and he can provide that information in a phone call.
Data Analytics

Once a hospital has its go-forward EHR solution in place, a hospital is far from being done. An EHR truly is just the first step and analyzing the massive amount of patient, financial, and operational data is critical for a hospital to take the next step in its evolution. That being the case, more than 26% of hospital leaders said they were planning to purchase an enterprise analytics suite or at least one analytics tool in 2015 – 30% of these purchases were first-time rather than replacements so this space is still very much in its infancy, relatively speaking. It is clear that the Data Analytics space is very fragmented and still fairly new.

CIO’s are the hospital leaders most dialed into the promise Data Analytics solutions will bring to healthcare, although other positions are interested as well.

Over 60% of CIOs said their organization is planning to make some sort of purchase in the Data Analytics space during 2015. The market for either an entire suite or simply a tool that can do some analysis is very large.

Figure 22: Data Analytics Purchase Intention by Role
As you can see, McKesson is the market share leader in this space, controlling market share among every hospital size group:

- Numerous hospitals are looking to purchase a Data Analytics tool for the first time in 2015
- Smaller facilities are less likely to have a Data Analytics tool
- Despite McKesson’s consistent lead as the most-used tool in the space, there are numerous other products with small chunks of market share
Figure 24: Data Analytics Market Share < 100 Beds

Figure 25: Data Analytics Market Share 100-250 Beds
Figure 28: Data Analytics Market Share > 1000 Beds
McKesson leads market share in the Data Analytics space, but its most impressive achievement might be appealing to virtually every size of hospital in a wide range of products. There are very few graphs in this report where McKesson does not receive at least a couple percent.

This poses a huge opportunity for McKesson as the company has the ability to compete in many, many spaces.
McKesson’s Take

McKesson Technology Solutions (MTS) is part of McKesson Corporation, a Fortune 15 company dedicated to the business of better health. With the industry’s most diverse portfolio of software, services and consulting expertise, MTS serves a broad spectrum of healthcare, ranging from hospitals and large integrated health systems to physicians, home health, imaging centers, retail pharmacies, payers and health plans. Our aim and passion is to help our customers chart a clear, focused and achievable path that leads to better health for their businesses and the communities they serve.

MTS offers a wide range of technology solutions and services, with No. 1 positions in areas as diverse as health plan payment management, enterprise intelligence and physician revenue cycle outsourcing, to name a few. Examples of our extensive market experience include:

- 80,000+ physicians use MTS revenue cycle and practice management services or electronic health record products
- 2,000+ hospitals and health systems use the RelayHealth Financial connectivity network to process more than 5 million patient claims, worth $1.1+ trillion annually
- 14+ billion prescription transactions are managed by RelayHealth Pharmacy each year, which services 50,000+ retail pharmacies
- InterQual® is used by over 72% of hospitals, and all of the top 10 health plans in the United States use one or more McKesson solutions

The 360° perspective we’ve gained by working with customers across healthcare means we can help you make real progress today and plan for the future as the shift continues toward value-based care. Through our Better Health 2020™ strategy, we can help you tackle what’s ahead in key areas such as financial management, quality and performance improvement, connectivity and risk assumption as you transition toward value-based care and reimbursement. So whether you’re just getting started or have advanced capabilities, we work as your strategic partner providing focused, attainable steps to fuel long-term success and help your business thrive.
Data Analytics Mindshare

This area appears poised to consolidate significantly in 2015. Epic, Cerner and McKesson have the most mindshare from hospital leaders in this study, however, their respective strengths are at different hospital sizes:

- Cerner appears to have significant mindshare among facilities with fewer than 100 beds
- McKesson is poised to remain the market leader in hospitals with 100-250 beds
- Epic, Cerner and McKesson are poised to gain significant market share among hospitals with 251-500 beds
- Epic takes the lead among hospitals with more than 251 beds
Figure 30: Data Analytics Mindshare < 100 Beds

Figure 31: Data Analytics Mindshare 100-250 Beds
Figure 34: Data Analytics Mindshare > 1000 Beds
Data Analytics Renewal

With over 26% of hospitals looking to purchase something to help with Data Analytics, there is already a big market. This market gets even bigger when you consider that at least 25% of those with a product are actively looking to leave their existing product offering in favor of solutions that can do more.

Note: We do have specific renewal rates for each unique vendor, but they won’t be provided in this report. ReactionData would be happy to provide each vendor’s renewal rate. Please contact Jeremy Bikman, jeremy.bikman@reactiondata.com, and he can provide that information in a phone call.

Figure 35: Data Analytics Renewal
Patient Engagement

The critical market for Patient Engagement is still forming as almost 40% of hospitals don’t have a solution yet. That isn’t stopping hospitals that already have patient engagement solutions from making changes though. A replacement market is developing.

Figure 36: Patient Engagement Purchase Intention by Role

The title breakdown of the purchase intention question indicates that many people within hospitals know what is going on with Patient Engagement. Most C-Level Executives and management in operations and quality seem to be aware of what is happening.
Patient Engagement Market Share

The market for Patient Engagement is still very diverse with a large number of players getting a percentage of the market. While Epic, MEDITECH and Cerner are the biggest players, as we saw in the EHR market, they play in different spaces as the breakdowns by hospital size clearly show:

- The smallest facilities are often still acquiring Patient Engagement solutions; however, CPSI leads market share in this category
- MEDITECH controls its sweet spot of 100-250 beds
- Epic and Cerner lead among hospitals with 251-500 beds and over 1000 beds
- Allscripts is tied with Epic for the lead among hospitals with 501-1000 beds

Figure 37: Patient Engagement Market Share
Figure 38: Patient Engagement Market Share <100 Beds

- MEDITECH: 10%
- CPSI: 11%
- Other: 17%
- Epic: 7%
- Cerner: 5%
- Press Ganey: 5%
- None: 40%
- MEDHOST: 6%

Figure 39: Patient Engagement Market Share 100-250 Beds

- MEDITECH: 29%

- Epic: 38%
- MEDITECH: 12%
- Medseek: 12%
- Cerner: 25%
- Studer: 12%
Patient Engagement Mindshare

Over 20% of those looking to address Patient Engagement in 2015 don’t know who they are looking at. That means mindshare in this space is wide open (a healthcare marketers dream!); however, there are currently leaders among various hospital sizes.

- Cerner and Epic lead overall and among hospitals with at least 251 beds
- CPSI wins among the smallest providers
- MEDITECH leads among hospitals with 100-250 beds

Figure 43: Patient Engagement Mindshare
Figure 44: Patient Engagement Mindshare < 100 Beds

Figure 45: Patient Engagement Mindshare 100-250 Beds
Figure 48: Patient Engagement Mindshare > 1000 Beds
Allscripts

While Allscripts still has a decent number of inpatient EHR customers (and a very large install base in the ambulatory EHR market), it has been focusing more and more on moving beyond the EHR to provide solutions to engage patients and to coordinate their care. As such they are beginning to gain a foothold in these areas, as the results show.

Allscripts’ Take

Allscripts provides innovative solutions that empower all stakeholders across the healthcare continuum to deliver world-class outcomes. Our clinical, financial, connectivity and information solutions for hospitals, physician practices and post-acute organizations are the essential technologies that enable A Connected Community of Health®. We believe that outcomes are generated through the synergies that a connected community creates.

The key to a thriving healthcare community is coordinated care across every setting: from the physician’s office to the hospital to post-acute settings and even the patient’s own home. We are dedicated to helping our clients achieve outcomes across the care continuum by providing solutions that help address their unique needs.

Our foundation for hospitals and health systems is built on a flexible and industry-recognized technology platform that focuses on connecting information and streamlining processes across clinical, financial and operational processes. We provide an adaptable infrastructure that can support Accountable Care, Pay for Performance and other industry models and programs without compromising on delivering outcomes such as improved care quality.

Solutions Across the Enterprise

Allscripts provides core clinical and core financial solutions, as well as other solutions to help hospitals and health systems thrive in a value-based care environment. Each solution area can be combined and tailored to meet an individual organization’s needs, providing minimum risk and maximum control to help drive achievement of positive clinical, financial and operational outcomes.

Core Clinical

Core clinical solutions ensure that organizations have put the right clinical system in the hands of providers to drive towards best-practice coordinated care for patients. Core clinical solutions can provide enterprise-wide, evidence-based guidelines while improving clinical workflow. Additionally, these solutions help you meet regulations of today and tomorrow while driving towards a single patient record and allowing for the most cost-effective, quality care by providing visibility across the care continuum.
Patient Engagement Renewal

With 48% of hospitals addressing Patient Engagement in 2015 and a majority of those who are definitely leaving their current vendor, there is a big replacement market in the realm of patient engagement.

Note: We do have specific renewal rates for each unique vendor, but they won’t be provided in this report. ReactionData would be happy to provide each vendor’s renewal rate. Please contact Jeremy Bikman, jeremy.bikman@reactiondata.com, and he can provide that information in a phone call.

Figure 49: Patient Engagement Renewal
Over 50% of hospitals will be selecting a new Population Health Management solution this year. This makes quite a bit of sense given that legislation is forcing hospitals to move towards value and quality of patient care. As such, Population Health Management is definitely top of mind for quite a few hospital executives.

In other words, the Population Health Management market in 2015 is going to be absolutely gigantic.
Population Health Management Market Share

With the market as big as it is (and will become), it should be even more heartening for vendors that there isn’t really a power player dominating...yet. Not a single vendor has more than 10% market share.

- The always popular None and Other are the largest vote getters in most hospital size categories
- McKesson, The Advisory Board and MEDITECH do well among smaller facilities
- Epic, Allscripts and Optum garner a lot of interest among larger facilities
- Cerner shows up at nearly every hospital size

Figure 51: Population Health Management Market Share
Figure 54: Population Health Management Market Share 251-500 Beds

Figure 55: Population Health Management Market Share 501-1000 Beds
Figure 56: Population Health Management Market Share > 1000 Beds
Population Health Management Mindshare

- Epic, The Advisory Board, Allscripts and Cerner lead the overall pack when it comes to Population Health Management mindshare but the breakdowns change depending upon the size of facility.
- McKesson, MEDITECH, The Advisory Board and Allscripts have the top mindshare numbers among smaller facilities.
- As with many product lines, Epic starts to take over the mindshare among facilities from 251-500 beds and leads for larger facilities.
- Cerner competes strongly with Epic in the 251-500 space and among the largest hospitals.

Figure 57: Population Health Management Mindshare
The Advisory Board has 10% of the Population Health Management market (second largest individual market share for the product line) and does some work helping providers transition to ICD-10. Its current market share in Population Health Management is highest among hospitals with 100-250 beds, but the mindshare for 2015 suggests this may expand dramatically.
Health Care’s Proven Performance Improvement Platform

Purposefully Built for Successful Execution on Value-Based Care Imperatives

**Advisory Board Company Performance Technology In Numbers**

- **1,800+** Hospitals deployed on our technology
- **550K+** Physicians profiled on performance
- **60%+** Admissions flowing through our platforms
- **10M+** At-risk lives managed using our technology
- **1.2B+** Practitioner-level claims in total market database
- **$700M+** Value realized from our technology annually

**MARGIN IMPROVEMENT**
Cost Reduction and Revenue Cycle Management

- Increase workforce efficiency
- Manage supply chain
- Reduce avoidable clinical costs
- Protect and capture revenue

**WORKFORCE**. Labor cost analytics and enterprise-wide workforce management dashboard.

**CLINICAL SOURCING**. Supplier-neutral sourcing platform and automated vendor analyses.

**SURGICAL PROFITABILITY**. OR capacity and surgical analytics.

**ELIGIBILITY AND PATIENT PAYMENT**. Patient payment estimation and point-of-service collections.

**CODING AND DOCUMENTATION**. Coding accuracy, CDI and post-payment audit management.

**DENIALS AND UNDERPAYMENTS**. Payment variance tracking, contract compliance analytics.

**GROWTH**
Physician, Consumer, Payer and Employer Strategies

- Design growth strategy
- Build a high-value network
- Minimize referral leakage
- Attract and satisfy consumers

**MARKET INTELLIGENCE**. Total market analytics on physician activity and connections.

**PHYSICIAN RELATIONSHIPS**. Mobile, PRM workflow technology with real-time outreach tracking.

**REFERRAL WORKFLOW**. EMR-agnostic referral management platform for seamless referral transfers.

**LEAKAGE ANALYTICS**. Algorithmic patient-provider matching and real-time leakage detection.

**PATIENT EXPERIENCE**. Mobile patient rounding platform for real-time service recovery.

**CARE TRANSFORMATION**
Provider Alignment and Population Health

- Engage physicians
- Improve practice performance
- Secure, manage at-risk lives
- Deliver proactive care

**PHYSICIAN PERFORMANCE**. Security-adjusted comparative physician utilization, quality analyses.

**MEDICAL GROUPS**. Cost, productivity and revenue analytics for employed physician practices.

**CLINICAL INTEGRATION**. Cross-continuum physician performance management for CI programs.

**RISK-BASED CONTRACTS**. Payment modeling, benchmarks and predictive analytics for managing covered lives.

**CASE MANAGEMENT**. Integrated patient data and automated care plan customization and workflows.

**CLINICAL RISK SURVEILLANCE**. Real-time risk detection using structured data and free text analytics.
Figure 62: Population Health Management Mindshare >1000 Beds
Population Health Management Renewal

There is a growing replacement market in the world of Population Health Management. A solid percentage of those who are addressing Population Health Management will be replacing an existing product.

Figure 63: Population Health Management Renewal
Revenue Cycle Management

Over 31% of hospital leaders said they were going to purchase a revenue cycle management solution in 2015.

The purchase intention may be even higher than that, however, as over 42% of CFOs said they intend to purchase an RCM product.

Figure 64: Revenue Cycle Management Purchase Intention by Role
RCM Market Share

McKesson leads overall market share in the RCM market and plays well in almost every category. However, McKesson’s lead accounts for only 18% of the market, so there is plenty of space for other vendors to compete:

- Nearly a quarter of the smallest facilities don’t have a go-forward RCM solution yet, but they are looking
- Cerner and 3M lead among those with 100-250 beds
- Epic and McKesson lead among facilities with at least 251 beds

*Figure 65: Revenue Cycle Management Market Share*

MedAssets

MedAssets is one of the rare companies that seems able to appeal to a hospitals of all sizes. It maintains a portion of the market share in Revenue Cycle Management across all hospital sizes.

MedAssets' Take

Improve your revenue performance.

Current trends indicate hospitals are losing three to five percent of net revenue from inadequate revenue cycle management processes and procedures. MedAssets proven revenue cycle processes and exception-driven technologies optimize capturing the reimbursement owed for the services performed. Our full portfolio of solutions improve patient payment estimation, claims coding accuracy, contract modeling, net revenue capture, defensible pricing strategies and regulatory compliance. Sustaining revenue performance requires preparing now for significant changes in payment restructure. We help your organization prepare with specific solutions, comparative analytics and strategies to mitigate risk, identify savings opportunities and align cost to payment to help transition toward risk-based reimbursements.
The Revenue Cycle Management market share is very fragmented but the mindshare shows a few players that are potentially poised to take large leads in 2015. Cerner, Epic and McKesson lead the way in mindshare.

- McKesson leads among hospitals with fewer than 100 beds
- Cerner leads mindshare among hospitals with 100-250 beds
- Epic leads among hospitals with more than 250 beds though Cerner competes with them among hospitals with more than 1000 beds
Figure 74: Revenue Cycle Management Mindshare 251-500 Beds

Figure 76: Revenue Cycle Management Mindshare > 1000 Beds

*Primarily Ambulatory/Outpatient
RCM Renewal

With over one third of those addressing RCM leaving their existing vendor, there is a substantial, and surprising, replacement market in RCM. The change in payment model is certainly having an impact.

Note: We do have specific renewal rates for each unique vendor, but they won’t be provided in this report. ReactionData would be happy to provide each vendor’s renewal rate. Please contact Jeremy Bikman, jeremy.bikman@reactiondata.com, and he can provide that information in a phone call.
Data Security

With identity theft on the rise and breaches costing institutions millions (and sometimes tens of millions) of dollars in fines, it isn’t too surprising that healthcare providers are on the lookout for better security products. Over 24% are planning to make a purchase in 2015. Given the very serious impacts that data security breaches have had, we’re a little surprised that this category isn’t getting significantly more attention. Maybe a little more pain will spur more action.

Figure 78: Data Security Purchase Intention by Role
The data security market currently has a few major power players and a lot of smaller contenders. There doesn’t seem to be a vendor that is specifically dedicated to healthcare data security. One would think this will change sometime soon.

- Cisco is the largest vendor for hospitals with up to 500 beds
- McAfee leads among hospitals with 501-1000 beds
- VMware pulls into a tie with Cisco for hospitals with 501-1000 beds
- Most hospital executives at the largest facilities are unsure who they are currently using for data security

Figure 79: Data Security Market Share
Figure 80: Data Security Market Share < 100 Beds

Figure 81: Data Security Market Share 100-250 Beds
Figure 82: Data Security Market Share 251-500 Beds

- Barracuda: 5%
- Symantec: 5%
- None: 5%
- Unsure: 14%
- IBM: 14%
Figure 84: Data Security Market Share > 1000 Beds

- Unsure: 43%
- None: 14%
- McAfee: 14%
- VMware: 14%
- Unisys: 14%
Data Security Mindshare

Cisco, at the moment, is way out front in mindshare with McAfee, VMware and Barracuda poised within striking distance to make some serious inroads into healthcare:

- Cisco leads mindshare among hospitals with up to 500 beds
- McAfee pulls into a tie with Cisco for the lead among hospitals with 501-1000 beds
- McAfee leads mindshare among the largest hospitals

Figure 85: Data Security Mindshare
Data Security Renewal

Only 22% of hospital leaders are definitely renewing their existing product, which means there is an incredibly large replacement market in the world of data security. Simply put, this segment is still completely, and utterly, wide open for all comers.

Note: We do have specific renewal rates for each unique vendor, but they won’t be provided in this report. ReactionData would be happy to provide each vendor’s renewal rate. Please contact Jeremy Bikman, jeremy.bikman@reactiondata.com, and he can provide that information in a phone call.
ICD-10 Migration

Over 58% of hospital leaders said their organization plans to address ICD-10 in 2015. Given the impacts this migration will have on hospital operations and fiscal health, this isn’t very surprising. This was the highest percentage brought up by hospital leaders; however, the numbers get even higher, and more interesting, depending on the role.

Over 70% of CMOs, CIOs, CFOs, and CMIOs each said they planned to address ICD-10 during the next year. While only 58% of all hospital leaders said they were looking at ICD-10, these responses from C-level executives indicate that the number is probably even higher.
ICD-10 Migration Market Share

3M holds the largest market share among a very fragmented ICD-10 market. Many companies attempt to compete for hospitals of specific sizes.

- Other, None, and Unsure account for 55% of the market share
- 3M leads overall market share thanks to its lead among hospitals with fewer than 500 beds
- Optum pulls into a tie with 3M in market share for hospitals with 501-1000 beds
- Epic and McKesson lead market share among hospitals with more than 1000 beds
Figure 94: ICD-10 Migration Market Share < 100 Beds

- Epic: 25%
- McKesson: 17%
- Other: 8%
- 3M: 8%
ICD-10 Migration Mindshare

The mindshare of ICD-10 looks a lot like its market share. Marketers will be excited by the potential to persuade over 60% of facilities who don’t even know who they will work with:

- Other firms, which are usually small consulting groups, are getting the majority of mindshare
- Many facilities have no idea who they will work with, meaning there is an opening for many firms to jump in
- 3M leads mindshare among established firms

Figure 99: ICD-10 Migration Mindshare
Figure 100: ICD-10 Migration Mindshare < 100 Beds

Figure 101: ICD-10 Migration Mindshare 100-250 Beds
Figure 104: ICD-10 Migration Mindshare > 1000 Beds
ICD-10 Migration Renewal

A strong majority of hospitals working on ICD-10 in 2015 will continue to work with the same vendors.

Note: We do have specific renewal rates for each unique vendor, but they won’t be provided in this report. ReactionData would be happy to provide each vendor’s renewal rate. Please contact Jeremy Bikman, jeremy.bikman@reactiondata.com, and he can provide that information in a phone call.
Conclusion

Billions are going to be spent in 2015 on medical technology and this report of data collected just a few weeks ago shows where a lot of that money is headed. Some vendors are in line to gobble up market share while others will be holding on for dear life.

The good news for everyone in the industry is that the market is not settled. Many hospitals are unsure how they are going to spend in 2015, which leaves an opening for vendors that are struggling to regain footing. It also serves as an opportunity for those who are dominating to increase their lead.

What will happen? That’s anyone’s guess, but we’ll know how things went down this time next year. Best of luck to healthcare vendors on another big year.

*Note – If you’ve read this data closely, you can probably guess that we know a lot more than we’ve published here. That’s deliberate. Every company has its strengths and its weaknesses and, frankly, we aren’t interested in airing anyone’s dirty laundry. That being the case, if you want this specific (and private) information about your company, feel free to contact Jeremy Bikman (jeremy.bikman@reactiondata.com). He will be happy to talk you through the specific results related to your company.
Appendix A

Survey Participants by Role

In three weeks, this study received feedback representing purchasing decisions in a quarter of United States hospitals. Even more impressive, 80% of the hospital leaders who responded have C-level titles. Here is a title breakdown:

Figure 106: Survey Participants by Role
Every vendor that appeared multiple times in this report was given the opportunity to provide content in it (at no cost). The following are analyst notes on vendors who chose not to do so.

3M

3M is virtually the only major brand with substantial mindshare and market share in the realm of ICD-10 migration. Given that ICD-10 is poised to be one of the biggest solutions purchased this year, that’s a big deal. 3M flat out dominates mindshare and is poised for a big year in 2015.

Cerner

Like Epic, Cerner is poised to gain market share in 2015 and is most popular among large facilities. Unlike Epic, it appears to appeal to virtually every size of hospital in the country. While you won’t see Cerner dominating every specific class of hospital, it does have material strength in every single market in healthcare. That’s impressive.

Cerner’s sweet spot seems to be over 1000 beds, where it often beats out even Epic for mindshare.

CPSI

CPSI appeals to very small facilities and it has historically done so very well. Its EHR and Patient Engagement solutions both lead market share among hospitals with fewer than 100 beds.

eClinicalWorks

eClinicalWorks appeals to clinics with its solutions focused on outpatient treatment. It is well respected and appears poised to retain market share and expand in 2015.
MEDITECH

Hospitals in the 100-250 bed range love MEDITECH. It is really that simple. More than any other vendor, MEDITECH has zeroed in on a certain size of the market and is really dominating it.
Appendix C

Participating Facilities

One quarter of US Hospitals were represented in this study. The following facilities and health systems participated:

Abbeville General Hospital
Abington Memorial Hospital
Acuity Hospital of South Texas, LLC
Adair County Memorial Hospital
Adams County Regional Medical Center
Adventist La Grange Memorial Hospital
Adventist Medical Center - Portland
Akron General Health System
Akron General Medical Center
Alameda Health System
